

OncoStem CanAssist Breast

TRUSTED BY MORE THAN 400 INDIAN AND INTERNATIONAL ONCOLOGISTS

MESSAGE FROM CEO

Dear Colleague

10 publications in reputed journals, global validation in about 4000 patients, proven prospective use and efficacy in ~2500 patients from India, UAE, Turkey and the strong support and belief from each one of you pretty much sum up CanAssist Breast journey so far! We have completed 5 key European studies of which one is Dutch sub-cohort of patients from a prospective large randomised clinical trial TEAM. The recent publication in The Breast 2022 is a critical one assessing the efficacy of CanAssist Breast in a European breast cancer patient cohort which is ethnically / racially different from its development cohort, India

On the sales side, we have doubled new CanAssist Breast prescribers in the last fiscal year.

We aim to exponentially grow our sales via strategic alliances in select Asian and additional Middle Eastern countries during this new fiscal year. Long term data on patients who used CAB 5 years ago to plan chemotherapy, indicate robust performance of the test with a NPV of 95% which is a HUGE testament of accuracy of CAB.

As I sign off, I would like to thank each one of you for your trust and support.

Looking forward to raising the bar across all our functional areas during the coming days!

DR. MANJIRI BAKRE
Founder & CEO,
OncoStem Diagnostics

CanAssist Breast Brave Hearts Speak

CanAssist Breast ► Breast Cancer Awareness

February 18

Here is what Safinaz Begum - a breast cancer survivor has to say how [#CanAssistBreast](#) helped her in her treatment and with her fight against cancer.

Like Safinaz Begum, OncoStem is [#ClosingTheCareGap](#) by helping many such breast cancer fighters by giving them a definitive way forward to take informed decisions. The AI based prognostic test - CanAssist Breast also helps the oncologists in personalising the treatment to improve patient's quality of life.

To know more about Onco... [See more](#)

On World Cancer Day we shared a few stories of our patients to whom CAB was a boon.

In line with “Closing The Care Gap”, we shared a few stories of Breast Cancer Fighters, for whom, our innovation [#CanAssistBreast](#) was a boon.

For many, CanAssist Breast also helped in personalising the treatment post-surgery. We are glad, we have helped many patients in determining the risk of recurrence and hence avoid chemotherapy.

[#ClosingTheCareGap](#), OncoStem aims to continue and reach out to many more patients.

OncoStem
empowering choices

“

Year 2017 was a year which will never fade away as I was victorious in defeating breast cancer, but the battle was too hard. Armed with knowledge from my previous experience, in 2021 when I was re-diagnosed with breast cancer I took CanAssist Breast (CAB) - a prognostic test by OncoStem. CAB indicated this tumour was not very aggressive and I have a low risk for breast cancer recurrence hence I avoided chemotherapy. CanAssist Breast - the prognostic test empowered me to defeat cancer the second time with ease and OncoStem helped in closing the gap in cancer treatment.

”

- Rita Singal, Breast cancer fighter

OncoStem
empowering choices

“

When we learned that my mother was diagnosed with stage 2 breast cancer, we were in despair. Though it was an early-stage breast cancer, we were worried about the chemotherapy as we were aware about the agonizing side effects it brings to the body. It is then we heard of CanAssist Breast (CAB), a prognostic test that helps in ruling out chemotherapy. As per the grading, my mother had a low recurrence score and hence we could skip chemotherapy. CAB also helped us with getting a personalised treatment. My mother was prescribed hormone therapy, which compared to chemotherapy has fewer side effects and was a right treatment for my mother. Thanks to OncoStem and the CAB test for closing the gap in cancer treatment.

”

- Dr. Lohita, Daughter of Saluja, Breast cancer fighter

OncoStem
empowering choices

“

When I was diagnosed with breast cancer, my only worry was to undergo chemotherapy which is very painful. Both my treating doctor and my thoughts conjured and I suggested CanAssist Breast (CAB) - a prognostic test by OncoStem. CAB indicated my tumour was not very aggressive and I have a 'low risk' for breast cancer recurrence hence I avoided chemotherapy. CAB gave me second lease of life and OncoStem helped in closing the gap in cancer treatment.

”

- Bimal Rani, Breast cancer fighter

International Womens' Day is celebrated on 8th March every year. This year the theme was “Break the Bias”

Commemorating the day and the theme, we wished all the women out there with a post featuring all the women at OncoStem. Also, standing by the theme, Breaking the Bias, we encourage women to come out and do what they are best at.

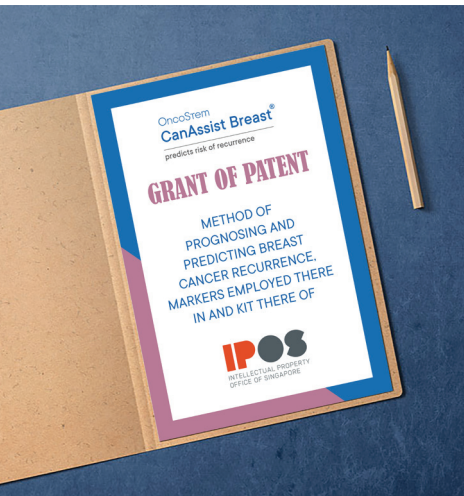

Women of today is breaking the bias and creating a world free of bias, stereotypes, and discrimination. A world that is diverse, equitable, and inclusive. A world where difference is valued and celebrated.

Collectively we can all [#BreakTheBias](#).

Patent Granted

As a brand, we believe in bringing a difference to the lives of cancer patients by means of innovative & revolutionary prognostic solutions. In the journey of our quest, here is another milestone we have achieved.

We are happy to share that we have been granted the patent by Intellectual Property Office of Singapore (IPOS) - Method of Prognosing and Predicting Breast Cancer Recurrence.

Awards won

The difference between success and failure is a great TEAM! The exemplary "TEAMWORK" at OncoStem was recognized and rewarded aptly by Business World!!
#OncoStem wins 2 BW Emerging Business Awards under the category

"Most innovative emerging enterprise" and

"Best women led emerging enterprise".

Very humbled to win 2 awards!

Felicitating top performers of FY 2021 – 22 at Annual business meet held at Bangalore on March 2022.
